

Rackspace Services for VMware Cloud

Changing the way you think about cloud.

Because enterprise cloud needs continue to evolve, Rackspace Technology and VMware® have worked together to develop Rackspace Services for VMware Cloud to deliver greater agility for your VMware workloads. If you run VMware and you want the flexibility of public cloud, then look no further than Rackspace Services for VMware Cloud.

Rackspace Services for VMware Cloud has been engineered from the ground up leveraging VMware Cloud Foundation with Dell EMC VxRail to enable the full VMware Software-Defined Data Center and self-service capabilities through VMware Cloud Director.

Key Benefits

- Control and manage cloud costs through pervasive consumption models.
- Benefit from the agility of the cloud while leveraging your investments in VMware technology and skills.
- Take advantage of additional resources and VMware expertise to move to the cloud.
- Lower the barrier of entry to VMware services.
- Lower the cost of traditional and steady-state workloads.
- Free up valuable IT resources to focus on business-critical initiatives.

Key Features

Consumption-based pricing: Pay for only what you use instead of paying for excess capacity. Enable predictable pricing models for data center (computer, storage, networking) and lifecycle services that fit your business model and financial needs.

Improved cloud economics: Move from the time and cost of physical infrastructure to an opex model with a lower cost of entry to VMware services.

Rapid deployment and on-demand scaling: Spin up a new account and scale up or down in minutes to accommodate traffic peaks or seasonal promotions. We make it easy for you to dynamically adjust resources to fit current demands.

Self-service: Expand and shrink your VMware environment in minutes to meet business needs without opening a ticket. A self-service multicloud portal increases visibility into resources, costs, billing, payments and identities across the infrastructure and as-a-service operations in real-time.

Robust UI and DevOps: Whether through the easy-to-use UI or both open-source and proprietary automation tools, complete a variety of infrastructure administration tasks to drive consistent, automated provisioning at scale. Automate complex infrastructure-as-code and take advantage of CI/CD pipelines.

Blended cloud environments: Connect your Rackspace Services for VMware Cloud environment to your other VMware and hyperscaler environments for a true multicloud experience. Burst into Rackspace Services for VMware Cloud as business needs dictate.

About Rackspace Technology®

Rackspace Technology is your trusted partner across cloud, applications, security, data and infrastructure.

- 2,600+ certified technical experts
- Hosting provider for more than half of the Fortune 100
- 20+ years of hosting experience
- Customers in 120+ countries
- Expertise managing the largest global VMware MSP footprint
- Jointly developed Center of Excellence with 250+ VMware certifications
- Over a 15-year strategic partnership with VMware
- Top five VMware service provider
- VMware expertise from virtualization to cloud

Fanatical Experience®

Experts on your side, doing what it takes to get the job done right. From first consultation to daily operations, Rackspace Technology combines the power of always-on service with best-in-class tools and automation to deliver technology when and how you need it.

Available Optional Features

Data Protection

Direct access to a high-performance, software-defined backup and recovery solution that allows you to configure retention policies in real time and fully restore from protected snapshot within minutes.

VM Management

A suite of tools and services to manage the configuration and protection of virtual machines providing patching services for supported operating systems and constant scanning for dangerous scripts, viruses and malicious codes.

RackConnect® Global

Bring multicloud connectivity to your footprint by linking the leading interconnection exchanges and cloud providers to a proprietary Rackspace Technology backbone.

Rackspace Elastic Engineering for VMware

On-demand access to a team of highly skilled VMware-certified experts who are available to work side-by-side with your organization to shape successful outcomes for VMware workloads.

Take the Next Step

Let's talk about how Rackspace Technology can help you change the way you think about cloud.
