Executive Q&A: Radscape Technology Talks FedRAMP and speeding the Path to ATO

Your journey to FedRAMP accelerated.

FedRAMP only exists because there is a facilitation known as preparing systems and individuals to a series of very stringent rules. As in government, it is perhaps the best example for us to see that the path to ATO is a long and complicated process. As a result, the Radscape Technology team has been preparing for the FedRAMP process that will be well underway.

We’re not associated with the FedRAMP process itself, but as the title of various initiatives comes to fruition, the FedRAMP team will be doing its job, and the outcome of the various initiatives is critical to the security process and the compliance process. The solutions to the FedRAMP coordination are going to be the same one we’ve had over the years, and as such, we do this in the cloud of today.

The bigger picture, however, is the need for cybersecurity and the need for access control. To system owners and many others, it’s a long process to get systems into the cloud. The FedRAMP process itself is going to be critical to say the least, as more and more organizations are looking to an on-demand service and an on-demand platform to be the best way to do business.

Of course, we do have an initial framework for how to do it. It’s nothing different than what we’ve always done. We need to get the access control and we need to get the trust in place. We need to build this trust in the system, and the FedRAMP process is going to be a critical component of that.

FedTalk: In what ways have you seen FedRAMP enable aging agencies to take advantage of innovative technology from small and other vendors?

Radscape: Now that we’re seeing many of the agencies run essentially on cloud, the process for the cloud is essentially the same one we’ve had over the years, and the FedRAMP process is going to be critical to say the least, as more and more organizations are looking to an on-demand service and an on-demand platform to be the best way to do business.

The bigger picture, however, is the need for cybersecurity and the need for access control. To system owners and many others, it’s a long process to get systems into the cloud. The FedRAMP process itself is going to be critical to say the least, as more and more organizations are looking to an on-demand service and an on-demand platform to be the best way to do business.

There are a couple of things that have helped us. One is the fact that we’ve had to deal with a number of different agencies and different types of systems over the years, and the FedRAMP process is going to be critical to say the least, as more and more organizations are looking to an on-demand service and an on-demand platform to be the best way to do business.

The bigger picture, however, is the need for cybersecurity and the need for access control. To system owners and many others, it’s a long process to get systems into the cloud. The FedRAMP process itself is going to be critical to say the least, as more and more organizations are looking to an on-demand service and an on-demand platform to be the best way to do business.

Of course, we do have an initial framework for how to do it. It’s nothing different than what we’ve always done. We need to get the access control and we need to get the trust in place. We need to build this trust in the system, and the FedRAMP process is going to be a critical component of that.

FedTalk: Since the FedRAMP initiative was first announced in 2013, how has the process evolved?

Radscape: The FedRAMP process itself is going to be critical to say the least, as more and more organizations are looking to an on-demand service and an on-demand platform to be the best way to do business.

The bigger picture, however, is the need for cybersecurity and the need for access control. To system owners and many others, it’s a long process to get systems into the cloud. The FedRAMP process itself is going to be critical to say the least, as more and more organizations are looking to an on-demand service and an on-demand platform to be the best way to do business.

There are a couple of things that have helped us.
