

## PRODUCT OVERVIEW

# DEDICATED VMWARE VCENTER

*With Dedicated vCenter, you can capitalize on the benefits of the cloud without taking on the risks.*

Dedicated VMware® vCenter from Rackspace enables organizations with large VMware estates to quickly extend into Rackspace data centers. You can use the technology, tools and processes you already have while experiencing cloud benefits such as faster deployment, predictable monthly pricing, and flexible capacity. It's all the benefits of VMware and the cloud without having to manage the infrastructure.

## WHY RACKSPACE FOR DEDICATED VMWARE VCENTER?

Rackspace allows you to migrate out of your data center without re-architecting applications, while giving you access to the enhanced security and predictable performance of single tenancy.

## KEY BENEFITS

### IMPROVED EFFICIENCY

- Get dedicated infrastructure – from storage, host machines and networking through the VMware® software stack – all while avoiding the possibility of over- (or under-) provisioning.
- Trade in your hefty CapEx investments for predictable monthly billing.
- Free up your staff for core business needs. Our VMware Certified Professionals (VCPs) help architect, deploy and troubleshoot your environment, no matter how complex.

### REDUCED RISKS

- Rein in shadow IT and its resource consumption, security issues, and potential compliance violations.
- Minimize the chance of business disruption through our 24x7x365 support and industry-leading service level agreements.
- Create a second data center for disaster-recovery planning.

### ENHANCED FLEXIBILITY & ACCESSIBILITY

- Rackspace offers the architecture to help you meet your needs, so you can build for optimal cost and performance, including the option to burst into the public cloud.
- Access Dedicated vCenter through two alternatives: the vSphere API and the vCenter Server portal.
- Allow your users to create their own deployments. You'll reduce demand for your staff resources while improving centralized lifecycle control over your virtual infrastructure.

## KEY FEATURES

- Infrastructure installed, configured, managed and monitored 24x7x365 by certified VMware experts
- Direct, on-demand access to VMware native technology
- Use of existing scripts and familiar tools
- Use the VMware vSphere Web Client to instantly provision VMs or programmatically provision them using the vSphere API
- Use your own licenses, or get licenses from Rackspace
- Licensing for VMware® vRealize™ Operations Manager™ (vROps) is included to automate IT operations management, manage performance, and gain visibility across physical and virtual infrastructure
- Optional Managed Backup and Recovery Service to help minimize the impact of downtime
