Application Security

Improve the security and performance of your web apps with enterprise-class WAF, DDoS and CDN solutions.

Your web applications are critical to your business as they serve as a main source of your revenue transactions and customer interactions. Web applications are also the top target for cyber attacks. Organizations need protection against well-known threats and DDoS attacks — all while optimizing web and mobile application delivery to their end users.

Rackspace Technology offers a portfolio of application security solutions that include everything your business needs to improve the performance, security and reliability of your web and mobile applications — with options for 24x7x365 support from certified security experts at Rackspace Technology.

Experts Dedicated to Your Success

The security experts at Rackspace Technology have deep knowledge and experience in both IT security and cloud security, and they hold 800+ security industry certifications — including 100+ cloud security certifications from AWS, Microsoft® Azure® and Google Cloud Platform™.

Organizations that need hands-on application security solution support can leverage expert service models including:

- **Advanced Monitoring & Resolution for Security:** Provides 24x7x365 security technology health monitoring, security automation, operational support and help desk.
- **Rackspace Elastic Engineering for Security:** Provides a dedicated pod of certified security experts who work as an extension of your team for expert onboarding and configuration support based on best practices, ongoing management and assistance with tuning, PCI compliance expertise and support for advanced policies and features.

Key Benefits

Reduce your risk and provide your users with an optimal web and mobile application experience.

- Secure websites against cyberattacks in real time
- Address PCI compliance needs
- Reduce downtime caused by DDoS attacks
- Deliver a fast and reliable web experience for your users
- Protect against account takeover, advanced bot attacks and API threats
- Leverage cloud-based delivery to protect any environment — on-premises or in the cloud — on AWS, Azure and Google Cloud Platform

Key Features

The portfolio of application security solutions at Rackspace Technology includes technology from Akamai, Cloudflare® and Imperva, and includes (but is not limited to) the following features:

- **Web application firewall:** Real-time protection against OWASP Top 10 threats, like SQL injection, cross-site scripting, illegal resource access and remote file inclusion. We offer solutions that are pre-tuned to immediately block, with zero false positives.
- **Advanced bot protection:** Combat automated attacks from scrapers, spammers and malicious bots, with options to detect attempts to perform account takeover via credential stuffing — without interfering with legitimate human users.

About Rackspace Technology®

Rackspace Technology is your trusted partner across cloud, applications, security, data and infrastructure.

- A Leader in the 2020 Gartner Magic Quadrant
- for Public Cloud Infrastructure Professional and Managed Services, Worldwide

Fanatical Experience®

Experts on your side, doing what it takes to get the job done right. From first consultation to daily operations, Rackspace Technology combines the power of always-on service with best-in-class tools and automation to deliver technology when and how you need it.
• **DDoS protection**: Protect against the largest targeted attacks on networks, applications and DNS servers — without incurring latency or interfering with legitimate users.

• **Global CDN and application delivery**: Help websites and applications to run faster than ever before with content caching, load balancing and failover delivered via a security-enabled CDN.

• **Real-time reporting**: A high-level dashboard of the overall threat landscape for your organization with robust logging and reporting to see what’s happening in real-time, and with actionable security insights.

• **Cloud deployment and policy management**: Easy to deploy and manage with no hardware or software required. Custom security rules and policies are easy to configure.

• **Customizable add-on services**: Our experts can help you add advanced features, including bot or SSL management, load balancing, rate limiting, SIEM integration, analytics and much more.
