

ObjectRocket Database-as-a-Service

Production-tested datastores in a simple-to-use and dependable cloud Database-as-a-Service platform.

Data is at the core of every modern business. But building and maintaining production database environments can become a massive burden on internal resources — requiring significant time and resource investments, along with the risks of new and unknown technologies. Because of this, many companies choose to remain with their legacy technologies and platforms.

ObjectRocket is a Rackspace Database-as-a-Service (DBaaS) platform that takes the burden of database strategy, planning, management and administration off your team so they can focus on your core business. Instead of spending time monitoring database performance, scaling resources and troubleshooting issues, they can turn their attention toward building new capabilities and growing your business.

Experts Dedicated to Your Success

ObjectRocket provides fully managed, automated and highly available MongoDB®, Elasticsearch®, PostgreSQL, Redis®, CockroachDB, and TimeScaleDB, supported by expert DBAs and customer data engineers.

ObjectRocket gives you instant access to production-ready instances of the latest database technologies, elastic resources to shrink and grow capacity, and performance based on your needs — all on a secure platform monitored and maintained by a team of database experts.

Key Benefits

Performant platform with global reach: ObjectRocket gets your data as close to your application as possible for lightning-fast speed with a widely distributed architecture, cloud options and global data center connectivity.

Easy adoption and usability: Go from signup to a fully functional database in minutes. An intuitive interface and efficient API make it easy to quickly deploy production-ready database stacks.

Smart scalability: A team of database engineers and administrators anticipate your future data needs and apply deep data-industry understanding to help you scale smoothly, rapidly and safely.

Reliability and expertise: Enjoy peace of mind that your databases are in good hands. ObjectRocket is backed by a team of database experts who are available whenever you (or your database) needs them. You can completely focus on your business while our experts ensure that your data is always available.

Lower TCO and increased business agility: Economies of scale yield operations savings by orders of magnitude compared to DIY. The portfolio of data stores combined with a depth of expertise across our experts enables you to consume the best fit technology without massive investment.

About Rackspace

Rackspace is your trusted partner across cloud, applications, security, data and infrastructure.

- A leader in the 2019 Gartner Magic Quadrant for Public Cloud Infrastructure Professional and Managed Services, Worldwide
- 300+ certified DBAs and 3,000+ cloud experts
- Hosting provider for more than half of the Fortune 100
- 20+ years of hosting experience
- Customers in 150+ countries
- Named the first-ever Certified Hosting Partner by MySQL
- Five-time Microsoft Hosting Partner of the Year
- 100+ Microsoft-certified professionals
- Oracle Platinum Partner
- Over 1,500 Oracle deployments
- 30,000 databases instances under management

“We are likely one of the largest installations of MongoDB in the world. Our partnership with ObjectRocket has allowed us to get where we are today.”

Jon Hyman :: CTO and Co-Founder, Braze

Fanatical Experience™

Experts on your side, doing what it takes to get the job done right. From first consultation to daily operations, Rackspace combines the power of always-on service with best-in-class tools and automation to deliver technology when and how you need it.

Key Features

Industry-leading data technologies: The experts at Rackspace regularly analyze the data industry to identify best-of-breed database technologies that meet your needs.

Available at scale: ObjectRocket is built on optimized infrastructure, so your databases can keep pace with your business growth. The platform is designed to elastically scale up and down based on your needs, with built-in failover and backed by a 99.95% platform uptime guarantee.

Lightning fast, highly performant: Infrastructure is optimized for database environments with high performance, low-latency networking and SSD storage.

Fully managed backups: All instances on the ObjectRocket platform come with managed daily backups and two-week retention to help ensure that your data is never lost.

Security best practices: All products on the ObjectRocket platform follow security best practices and include SSL/TLS, IP whitelisting, user authentication and at-rest encryption. The platform's management interface supports role-based access control and multifactor authentication.

Always-on support: Rackspace monitors your databases around the clock to help ensure that the database is active and operating and performing correctly. Experts take action whenever possible to avoid potential issues, reacts quickly when issues do arise and provides regular feedback when changes are needed to improve performance in the future.

Supported Platforms

- Amazon Web Services
- Google Cloud Platform™
- Rackspace Data Center

Supported Database Technologies

- **Relational:** PostgreSQL
- **Distributed/NewSQL:** CockroachDB
- **NoSQL/Document:** MongoDB
- **NoSQL/Search:** Elasticsearch
- **NoSQL/Key Value:** Redis
- **NoSQL/Time Series:** TimeScaleDB

Take the Next Step

Let's talk about how ObjectRocket can help you build and maintain production database environments.
