

Fixed Bandwidth Powered by Unitas Global for Digital Realty Trust Colocation

Take advantage of enhanced performance, reduced latency and improved network reliability.

Rackspace Technology® now offers 10Gbps and 100Gbps bandwidth provided by Unitas Global bundled with colocation at Digital Realty Trust Data centers. This network, which utilizes Unitas Global's "donut peering", was designed and built to bypass the Tier 1 core, wherever possible, and take customer traffic directly to its destination over the fewest networks and interconnections.

This combination of donut peering, which is a peering and interconnection service, with colocation services provided by Digital Realty Trust Datacenters, allows you to take advantage of enhanced performance, reduced latency, improved network reliability and increased scalability for your IT infrastructure. This bundled offering can optimize your network connectivity and data center operations, resulting in improved overall efficiency and cost-effectiveness.

The network is peered with over 5,300 IP networks to access over 6,000 SaaS providers, content providers, and broadband networks, across monitored and controlled links which guarantee the route, available bandwidth and performance.

Key Features

Automated access to 50 million edge locations and 900 carrier-neutral data centers worldwide:

- ✓ 10 Gbps and 100 Gbps internet connection options
- ✓ Performance-optimized routing
- ✓ Non-oversubscribed bandwidth
- ✓ 24x7x365 support and monitoring
- ✓ Fast protection against DDoS attacks

Benefits

Optimized performance: Global IP network peering and optimized routing supports direct, fast, low-latency connections

Predictable cost: Bandwidth based prices assures no overruns and a predictable monthly cost

Reliability: Automatic detection and re-routing around network failures and diverse ports, diverse PoPs, and diverse route redundancy options helps assure reliable connectivity

Uptime: Stringent Service Level Agreement (SLA) guarantee

Service Availability

Rackspace Fixed Bandwidth services are available from 16 Digital Realty Trust Colocation Data Centers, including:

Americas

- Dallas – Fort Worth, TX
- Ashburn, VA
- Chicago, IL
- Los Angeles, CA
- Miami, FL
- New York, NY
- Phoenix, AZ
- San Francisco, CA
- San Jose, CA

Europe:

- London, UK
