

Integration and API Management Assessment

Base your software purchase and integration decisions on an analysis of your current and future needs.

Software-purchase decisions typically require involvement across multiple areas of the business, which can result in some long-term challenges for your IT department. Whereas IT leaders prefer to make purchase decisions based on how well new software solutions integrate with existing applications, business leaders outside of IT often base their decisions on specific features and functions that address the day-to-day pains they experience while running the business.

When all is said and done, it's the IT department that has to make all systems work together seamlessly, across multiple clouds, data centers and siloed departments. And when you consider that the average organization utilizes more than 1,000 applications, you begin to see the strain that's placed on IT resources.

Experts Dedicated to Your Success

Address your software headaches with an Integration and API Management Assessment from Rackspace. This assessment helps you evaluate the current state of software integration across your entire organization by looking closely at your data, your processes and the applications supporting them. You'll then receive application integration recommendations that align with your organizations overall goals and strategies.

Key Features

Rackspace will work with your team to:

- Understand your desired outcomes and key business objectives
- Assess the current state of your applications and integration capabilities
- Understand functional and technical requirements
- Hold discovery sessions with your team delivered by Rackspace integration experts
- Identify opportunities for improvements and enhancements
- Recommend the right solutions to help minimize costs and maximize your ROI

Outcomes for the Rackspace Integration and API Management Assessment will include:

- Recommendation for an integration solution with baseline ROI
- High-level architecture definition
- Documentation of engagement
- High-level use cases
- Initial high-level project effort
