RACKSPACE SERVICE BLOCK: ARCHITECT & DEPLOY FOR AWS

High-performance, customized AWS solutions built, designed and deployed to meet unique business needs.

Today's hyper-scale public clouds are catalysts for digital transformation, delivering more flexibility, agility and cost savings than ever before. When planning your move to the AWS cloud, it's critical that your cloud environment is architected to take full advantage of all the capabilities and benefits that AWS has to offer. Rackspace custom-designs your cloud environment to help ensure optimal performance, security and cost-efficiency, and manages your deployment completely and efficiently.

WHY RACKSPACE FOR ARCHITECT AND DEPLOY SERVICES?

Rackspace is a next-generation cloud services provider, managing the full cloud lifecycle to help ensure that your solution achieves its full potential. Certified cloud architects and engineers design, build and deploy your cloud infrastructure to meet your specific requirements, leveraging learned best practices for optimal cloud performance and reliability.

KEY FEATURES

Architectural Best Practices: Rackspace leverages cloud architecture best practices in the areas of cost- and performance-efficiency, reliability and security and provides a detailed diagram of the proposed architecture. They also make infrastructure-as-code artifacts available to your team for ongoing environment management.

Dedicated Experts: A named Technical Onboarding Manager (TOM) serves as a single point of contact and escalation for your team, tracking project deliverables, risks and timelines to ensure successful project completion. An assigned solution architect identifies your unique business requirements and creates a detailed, customized solution to meet them. An assigned build engineer translates the detailed design into a deployable public cloud infrastructure.

Monitoring and Remediation: Environments that will be managed by Rackspace through their Manage and Operate offer are configured with monitoring and alerting capabilities. They will also create runbooks to escalate and respond to any incidents before they become major issues.

Consultative Approach: Rackspace provides advanced consultation on cloud strategy, as determined by key business drivers, as well as introductory training to explain tools and processes and weekly reviews of outstanding action items, dependencies and risks.

Accelerate Cloud Modernization: Full infrastructure-as-code deployment helps you build and manage cloud infrastructure through code, utilizing industry-standard DevOps tools and techniques.

ADDITIONAL SERVICES

Every business faces unique challenges, and Rackspace Service Blocks offer flexible, specialized cloud solutions to solve your constantly evolving needs — regardless of where you are in your cloud journey. Additional Managed Public Cloud Service Blocks include:

Cloud Foundation: Easily manage your accounts and user permissions in a consolidated control panel. Extend AWS support with 24x7 ticketed access to Rackspace cloud experts.

Tooling: Industry-leading tooling provides automated analysis, reporting and recommendations for improved cost, reliability, redundancy and security.

TRUST RACKSPACE

- A leader in the 2018 Gartner Magic Quadrant for Public Cloud Infrastructure Managed Service Providers, Worldwide
- Hosting provider for more than half of the Fortune 100
