

RACKSPACE SERVICE BLOCKS: ARCHITECT AND DEPLOY

High-performance, customized cloud solutions built, designed and deployed to meet unique business needs.

Today's hyper-scale public clouds are catalysts for digital transformation, delivering more flexibility, agility and cost savings than ever before. When planning your move to the cloud, it's critical that your cloud environment is architected to take full advantage of all the capabilities and benefits that the cloud has to offer. At Rackspace, we customize your cloud environment to ensure optimal performance, security and cost efficiency, while managing your deployment completely and efficiently.

WHY RACKSPACE FOR ARCHITECT AND DEPLOY?

Rackspace is a next-generation cloud services provider, managing the full cloud lifecycle to help ensure your solution achieves its highest potential. Our certified cloud architects and engineers design, build and deploy your cloud infrastructure to meet your specific requirements, leveraging learned best practices for optimal cloud performance and reliability.

KEY FEATURES

Architectural Best Practices: We leverage cloud architectural best practices in the areas of cost and performance efficiency, reliability and security and provide a detailed diagram of the proposed architecture. For Google and AWS deployments, we also make infrastructure-as-code artifacts available to your team for ongoing environment management.

Dedicated Experts: A named Technical Onboarding Manager serves as a single point of contact and escalation for your team, tracking project deliverables, risks and timelines to ensure successful project completion. An assigned Solution Architect identifies your unique business requirements and creates a detailed, customized solution to meet them. An assigned Build Engineer translates the detailed design into a deployable public cloud infrastructure.

Monitoring and Remediation: Environments that will be managed by Rackspace through our Manage & Operate offer are configured with monitoring and alerting capabilities. We'll also create runbooks to escalate and respond to any incidents before they become major issues.

Consultative Approach: We provide advanced consultation on cloud strategy, as determined by key business drivers. Introductory training to explain tools and processes, and weekly reviews of outstanding action items, dependencies and risks.

Accelerate Cloud Modernization: Full infrastructure-as-code deployment helps you build and manage cloud infrastructure through code, utilizing industry-standard DevOps tools and techniques.*

ADDITIONAL SERVICES

Every business faces its own unique challenges. With that in mind, Rackspace services are designed to be flexible, specialized cloud solutions to solve your constantly evolving needs regardless of where you are in your cloud journey. Additional Managed Public Cloud offers include:

Cloud Foundation: Easily manage your accounts and user permissions in a consolidated control panel. Extend AWS, Microsoft Azure and Google support with 24x7 ticketed access to Rackspace cloud experts.

Tooling: Industry leading tooling that provides automated analysis, reporting and recommendations for improved cost, reliability, redundancy and security of your public cloud infrastructure*.
