Ensuring the protection of your IT environment and the privacy of its data is crucial when it comes to fostering customer trust and acquiring new business. To do so, you must maintain security and compliance in accordance with various frameworks.

But considering the resource constraints that many IT departments face, your organization may not have the time to learn, adopt, implement and document new security measures. To help mitigate your risks, Rackspace Security & Risk Assessment service will evaluate your compliance with security frameworks, identify gaps, and provide recommendations to achieve the desired outcomes.

Experts Dedicated to Your Success
The security and risk experts at Rackspace will help you address your compliance needs for most security standards, including:

- NIST 800-171 (DFARS)
- NIST 800-53 (FISMA)
- FedRAMP
- HIPAA/HITECH
- ISO 27001/27002
- PCI
- SOC2

Rackspace experts are well-versed with the technical and business requirements of each framework and have the technical expertise to accurately evaluate your system, including applications and data, and identify where and how your system fails to meet the requirements. The Rackspace Security & Risk Assessment will leave you with a clear understanding of what steps you need to take to address the challenges in your environment, whether it is re-architecting your environment, updating how and where you store data, or improving your documentation processes.

Framework-Specific Evaluation and Guidance
The Rackspace Security and Risk Assessment will determine where you stand in relation to compliance standards for your chosen security framework, as well as identify gaps and recommend steps you can take to address compliance deficiencies. For this offering, Rackspace will:

- Determine which systems are in scope
- Determine in-scope data and how it is used, processed, stored and transmitted
- Evaluate the coverage of existing documentation relevant to your security processes
- Assess your current capabilities
- Provide architecture recommendations and engineering guidance
• Identify the specific remediation that’s required, then support it
• Develop documents needed to achieve compliance for the chosen security framework

This assessment includes the following deliverables:
• Gap assessment with remediation guidance
• Framework-specific submission documents

Key Benefits
• Faster path to compliance: With Rackspace on your side, your path forward to compliance is streamlined. Gaps are identified quickly with a solid remediation plan outlined by compliance experts.
• Dedicate time to other business areas: By relying on Rackspace to pore over the requirements for each framework and developing the plan to implement changes, your IT resources are free to advance other areas, such as scalability and performance.
• Strengthen trust in your customers and your reputation: By adopting and implementing a compliance framework, you can bolster your reputation for cybersecurity dedication — earning the trust of your customers who operate in industries where security and privacy are non-negotiable.

Take the Next Step
Let’s talk about how Rackspace Security and Risk expertise helps you achieve your goals.
