

Quickstart for Application Security

Protect mission-critical web applications and application infrastructure from common website security issues.

Quickstart for Application Security accelerates the adoption of application technology by providing a pre-designed solution to protect your web applications from common threats. Built with a Web Application Firewall (WAF), log management and multifactor authentication technology, it's designed to block common web application attacks, help prevent unauthorized user logins and identify potential malicious activity.

Experts Dedicated to Your Success

Web applications are one of a company's most valuable assets. They're often relied upon for the day-to-day operations of a business, can serve as portals for customers, and are an integral part of an organization's brand experience. Leverage the deep expertise, easy access and comprehensive support found only at Rackspace to help keep your vital web applications secure, 24x7x365.

Key Benefits

Rackspace provides a turnkey solution tailored to your business challenges, and helps ensure that you have the right coverage and capabilities to meet your security needs. Quickstart for Application Security benefits include:

- **Solution customization:** Rackspace tailors your solution based on business requirements, existing technologies and coverage needs.
- **Managed provisioning:** The cloud experts at Rackspace coordinate with leading technology partners to license, provision and configure the solution for your environment.
- **Onboarding and handoff:** Rackspace will train your staff on how to use and manage their security systems.
- **Environment Scoping:** Rackspace helps you address security coverage as your footprint evolves over time.
- **Notifications and reporting:** Rackspace will work with you on an ongoing basis to assess your security posture.

Key Features

Quickstart for Application Security combines the following features into a comprehensive application security package:

- **Inline Web Application Firewall:** Defends against common application attacks.
- **Multifactor Authentication:** Protects and validates user identities.
- **Log Management:** Aggregates logs and highlights anomalous users or activity.
- **Optional File Encryption and Key Management:** Provides granular data access policies.

Take the Next Step

Let's talk about how Quickstart for Application Security helps you achieve your goals.
