

Rackspace Service Blocks: Architect & Deploy

Certified Rackspace experts design, build and deploy your cloud infrastructure for optimal performance and reliability.

When planning your move to the public cloud, it's critical that your cloud environment is architected and deployed properly to take full advantage of the flexibility, agility, potential cost savings and digital transformation capabilities that the cloud has to offer. Rackspace experienced cloud architects custom design your cloud environment to help ensure optimal performance, security and cost-efficiency — while managing your deployment from start to finish.

Why Rackspace Service Blocks: Architect & Deploy?

Rackspace manages the full cloud lifecycle to help ensure that your solution achieves its full potential. With Rackspace Service Blocks™, certified cloud architects and engineers design, build and deploy your cloud infrastructure to meet your specific requirements. Rackspace leverages the deep experience of its collective teams along with industry best practices to deliver optimal cloud performance and reliability for your organization.

Key Features

Consultative Approach: Rackspace works closely with your teams to identify your key business drivers and construct a cloud strategy that aligns your public cloud environments with best practices for security, availability and operational excellence.

Centralized Project Management: Your onboarding manager serves as a single-point-of-contact and escalation for your team, tracking Rackspace deliverables, risks and timelines throughout the deployment.

Deep Public Cloud Expertise: Your organization will work with solution architects and engineers who are experts in public cloud solution design and deployment. In addition to certifications, they have extensive experience across core pillars of public clouds, including security, availability, performance and cost-efficiency.

Custom Solutions with Upfront Pricing: Your needs are unique. The Rackspace team will work closely with your team to understand your business and technical requirements. Prior to ordering, you'll see the all-in order fee based on your design requirements. After ordering, you'll be presented with a detailed technical design. Once approved, build engineers will implement the solution that solves your technical challenges, helping you meet your goals efficiently and effectively.

Best Practices from the Ground Up: From day one, your solution will be configured in accordance with best practices for security, monitoring and alerts. This can enable immediate operational visibility into the infrastructure that supports your workloads, while keeping them secure.

Reduced Time-to-Market: Rackspace solution architects and build engineers have worked on thousands of cloud deployments. If you have a specific need, chances are they've already solved it. They will call upon their deep experience to help you get up and running on the public cloud quickly and effectively.
