

RACKSPACE GOVERNMENT SOLUTIONS FOR TRANSPORTATION

Reduce your IT infrastructure capital expenditure by turning to a secure and compliant managed cloud solution.

Transportation agencies need the privacy-driven IT infrastructure and platform management required to create smarter cities and improve their transportation services. Yet, they're often locked into the high capital expenditures that come with aging data centers and legacy applications.

To solve this challenge, transportation organizations are turning to managed cloud solutions. In a managed cloud, you can still run the legacy applications you've come to rely on – while we take care of creating and managing the secure and compliant environment.

WHY RACKSPACE FOR TRANSPORTATION?

Rackspace provides you with the secure infrastructure, guidance, support and data insights to allow you to improve your traffic and transportation services and better target your investments – while enhancing your ability to collect, process, analyze and securely share sensitive citizen data.

KEY FEATURES AND BENEFITS

With the Rackspace FedRAMP JAB and FISMA authorized private cloud, you get a fully managed Platform-as-a-Service (PaaS) offering, blending the cost benefits and scalability of the public cloud with the security and customization of a private cloud.

Automated Security and Compliance: Let our team implement and administer the required security controls, based on NIST SP 800-171 DFARS, NIST 800-53, CJIS, FISMA and FedRAMP guidelines.

Data Insights: Gain valuable insights from your unified traffic or transportation data analytics platforms. We have extensive experience managing analytics platforms from Oracle®, SAP®, Microsoft®, Tableau® and Informatica®.

Digital Transformation Assistance: Our experts can help you build your strategy, assess your application portfolio, review your cost structure and identify the best-fit platform for your needs.

Migration Services: Get a team of migration specialists to help your organization transition to an agile, highly available, secure solution.

Backup and Disaster Recovery: Transportation organizations, contractors, SIs and ISVs need highly available and resilient environments to host their mission-critical applications. Let our team of experts determine the best option for you.

Fully Managed and Hardened Solution: Reduce your TCO when our experts manage your compliance and security, up through the virtual OS.

Standardization and Efficiency: Increase your turnaround time, as we operate, maintain and fully document approximately 80% of the security and compliance requirements, allowing you to inherit our existing FedRAMP JAB accreditation package.

24x7x365 U.S.-Based Service: Rely on our fully U.S.-based and staffed support center, located within our government headquarters in Washington, D.C.

Optimized Performance: Let our experts help you with resource provisioning, continuous integration (CI) and automated application performance monitoring.

TRUST RACKSPACE

- A leader in the 2018 Gartner Magic Quadrant for Public Cloud Infrastructure Managed Service Providers, Worldwide
