Blended Bandwidth for Colocation

Fast, secure and reliable connectivity from multiple carriers, optimized by Rackspace.

Rackspace Blended Bandwidth takes the risk out of single-carrier contracts by combining connectivity from multiple carriers in one connection. With a highly resilient, self-healing network comprised of four Tier 1 providers, if one provider goes down, the others seamlessly compensate.

EXPERTS DEDICATED TO YOUR SUCCESS
Blended Bandwidth customers leverage the same sophisticated network that powers Rackspace’s best-in-class managed hosting and cloud offerings. To enhance user experience, traffic is automatically routed to the carrier offering the lowest latency and highest quality of service. The highest levels of network security standards backed by global teams monitoring network activity 24x7x365 anticipate interruptions and mitigate threats.

KEY FEATURES
Rackspace Blended Bandwidth is available in all Rackspace data centers with colocation across North America, Europe and Asia Pacific, offering:

- **Protected Circuits**: Every connection comes with dual connections for redundancy.
- **95th-Percentile Burstable Billing**: Because traffic patterns are unpredictable, Rackspace doesn’t charge for the top 5% of traffic surges.
- **Security and Compliance**: This multi-layered approach to network security meets the strictest standards – including ISO 27002 and 27001, PCI DSS, SSAE16, SOC 1, 2 and 3, Privacy Shield, and the Content Protection and Security Standard.
- **DDoS Mitigation**: Available as a subscription service for proactive protection to identify malicious traffic with the first hostile packet or as an on-demand service that is activated if a security event is underway.
- **Control**: Access to full routing tables to facilitate granular traffic management.
- **IPs**: One IP included per colocated device, up to 16 devices; additional IP packages available up to /22 (1024 IPs).

KEY BENEFITS
**Lower Risk of Service Interruption**: Consuming bandwidth from multiple carriers introduces redundancy and reduces risk. If one carrier fails, traffic is automatically routed to another carrier for uninterrupted connectivity.

**Streamlined Vendor Management**: Select Blended Bandwidth in conjunction with a Rackspace colocation environment to eliminate managing multiple contracts or vendor relationships.

**Improved Network Security**: Rackspace network security experts keep your traffic safe by monitoring the network 24x7x365 and deploying the latest mitigation tools.

### About Rackspace

Rackspace is your trusted partner across cloud, applications, security, data and infrastructure.

- A leader in the 2018 Gartner Magic Quadrant for Public Cloud Infrastructure Managed Service Providers, Worldwide
- 3,000+ cloud experts
- Hosting provider for more than half of the Fortune 100
- 20+ years of hosting experience
- Customers in 150+ countries

---

### Fanatical Experience™

Experts on your side, doing what it takes to get the job done right. From first consultation to daily operations, Rackspace combines the power of always-on service with best-in-class tools and automation to deliver technology when and how you need it.
SERVICES DELIVERED YOUR WAY

Rackspace offers broad expertise and a vast portfolio of services across leading cloud platforms and technologies:

• **Networking and Data Center Specialists**: Highly trained Rackspace engineers monitor systems around the clock, constantly overseeing the security and uptime of your infrastructure.

• **Transformation Expertise**: Rackspace is the only colocation provider that can guide you step by step through the optimal technology platform – public cloud, private cloud, virtualization or bare metal – for each of your unique workloads.
